

- Aggregation = relationship where the child can exist independently of the parent. Class A instance is not the exclusive container of Class B instance
(romb gol)

- Composition = child cannot exist independent of the parent. When Class A is deleted then Class B is also deleted as a result
(romb plin)

- Dependency = reference of class B appears in a method of class A
(sageata punctata catre clasa de care depinde)

- Inheritance
(sageata normala)
